

## Radius<sup>90</sup>

### Collaborative Reporting for Maximizer Customers Using Microsoft Reporting Services

“ Radius<sup>90</sup> gave us reports that were critical to the successful performance of our business on a functional level as well as a corporate level. Such real-time access to information was what we were looking for all along.”

Leo Sadler,  
Manager of Technical Services, Frontier Airlines

“ One of the most impressive features of Radius<sup>90</sup> is its Libraries functionality. I love the concept of dragging and dropping common report objects that can be viewed and reused by all designated users. We have finally found a front-end reporting solution that can organise and centralise our reporting.”

John Crosby,  
IT Resource Project Manager, Headwaters Incorporated

90 Degree Software delivers on the promise of reporting with a collaborative reporting solution that takes advantage of your customers’ existing Maximizer and Microsoft Reporting Services infrastructure.

Radius<sup>90</sup> allows developers and business users alike to create, share, collaborate and deliver information throughout their organisation. Our unique re-use and re-purpose approach to reporting is winning accolades within the reporting community.

#### Today’s Reporting Landscape

Traditional reporting solutions are proving to be a difficult, time consuming, and costly undertaking. Many have turned to Microsoft Reporting Services to meet their reporting needs but only developers with plenty of time, resources and specialised skill sets can create reports within the Microsoft highly specialised development environment. At the other end of the spectrum, customers can turn to other basic Microsoft-compliant solutions but with very limited, non-flexible results.

Most organisations need to fill the gap that exists today in Reporting Services with an easy yet powerful and flexible reporting solution that is cost-effective and endorsed by Microsoft.

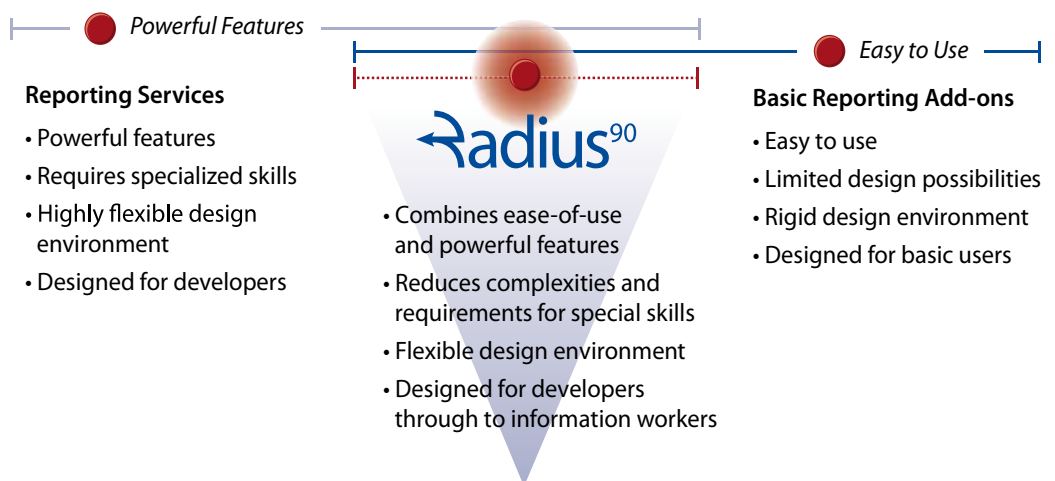

Fig 1: Fill the gap in Reporting Services with Radius<sup>90</sup>, a unique and cost effective reporting solution

## Filling the Gap with Radius90

Radius<sup>90</sup> Producer abstracts the complexities of a development environment, allowing report creation to be faster and easier while still providing robust and highly flexible report design. And, since Radius<sup>90</sup> offers 100% Microsoft Report Definition Language (RDL) compliance, developers can create a Radius<sup>90</sup> report and open it within the Reporting Services development environment for advanced editing and/or expanded complexity.

A development environment is simply too complex and time consuming for business users within an organisation so our Radius<sup>90</sup> Analyser solution simplifies what is confusing and challenging and empowers users to create reports in a matter of minutes with a Microsoft Office look and feel for familiarity and ease-of use.

## Unique Re-Use Rather Than Re-Create Approach

Unlike traditional solutions, Radius<sup>90</sup> provides a library of reusable objects that can be dragged and dropped into a new report. These libraries can be shared within your organisation in order to increase collaboration with all your report creators and consumers.

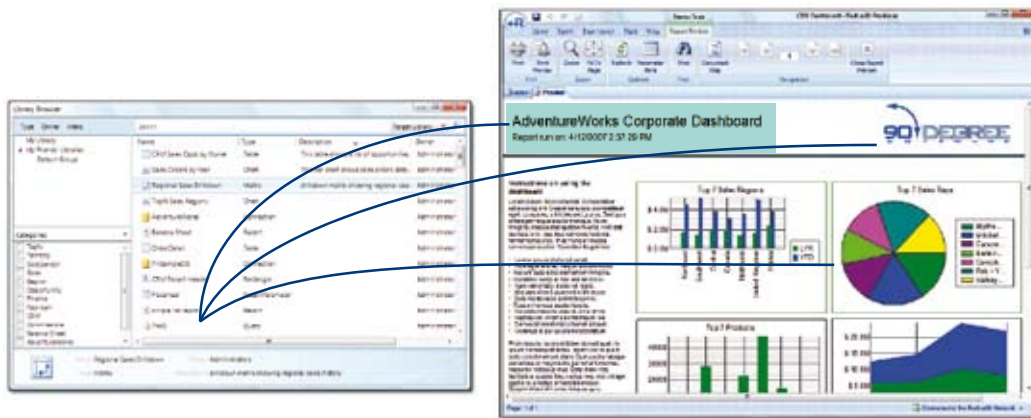

Fig2.: Unique re-use and re-purpose approach for collaborative reporting

## Increase Productivity and Collaboration

Searchable report and report component library allows you to reuse reports or report components that other report designers within your organisation create – increasing collaboration exponentially.

## Gain Immediate Value from Your Business Data

The Radius<sup>90</sup> rich design environment allows for quickly built reports that fulfill user requirements, helping customers gain immediate value from their Maximizer and other business data.

Radius<sup>90</sup> is quickly becoming the reporting solution of choice for organisations using Microsoft Reporting Services.

**ABOUT 90 DEGREE SOFTWARE** | 90 Degree Software is an independent software vendor that has built an innovative reporting platform that enables organisations to derive more value from their existing business intelligence systems. The privately held company is headquartered out of Vancouver, Canada.

## What Makes Radius<sup>90</sup> Different?

- Unique re-use rather than re-create approach to facilitate collaborative reporting
- Cost-effective social networking and collaboration functionality
- 100% RDL compliant, works within your existing Microsoft BI Infrastructure
- Easy-to-use, powerful report design interface
